BASF invests in capacity expansion of Basoflux® range of paraffin inhibitors

- **Increased production at the BASF site in Tarragona, Spain to support growing global demand for high-quality paraffin inhibitor chemistries**
- **Investment reinforces BASF's commitment to innovative and more sustainable aqueous-based dispersions for the Oil & Gas industry**
- **First deliveries expected beginning of 2025**

BASF plans to expand the global production capacity of its Basoflux® range of paraffin inhibitors at its site in Tarragona, Spain. This investment will enable BASF's Oilfield Chemicals business to meet the current and future demand of novel paraffin inhibitors for the Oil & Gas industry. Additional assets will create efficiencies and flexibility in the production of newly developed solutions, such as more sustainable aqueous-based dispersion paraffin inhibitors and solvent-based products. This plant expansion will also enable BASF to act swiftly to on-demand changes in the market. First customer deliveries are expected for the beginning of 2025.

“Through continuous innovation and investments, BASF reinforces its commitment to being a key player in the paraffin inhibitors market,” said Serge Ikink, New Business Development Manager Oilfield Chemicals, BASF. “We are successfully addressing a true market need with our innovative aqueous-based dispersion paraffin inhibitors. From a product standpoint, Basoflux are high-performing products that bring robust reliability in the application, which has led to customer trust even in the most challenging environments.”

Crude oil will continue to be in demand for years to come. As 'easy oil' is depleted in many locations, more 'challenging oil' needs to be produced. This will lead to an increased need to produce paraffinic crudes, requiring more effective chemistries to maximize the oil flow. BASF works closely with its customers to create fit-for-purpose (F4P) chemistries to support and enable more efficient oil production.

The new Basoflux dispersions produced at BASF's site in Tarragona will enable its customers to be more sustainable by using much less solvent than usual at lower temperatures. This will lead to cost savings and resource efficiency as less product is used overall.

About BASF Oilfield Chemicals

The global business unit Oilfield Chemicals is a leading supplier of a wide range of high-quality chemicals for oilfield applications, including drilling, cementing, stimulation, production additives, and enhanced oil recovery (EOR). Our solutions enable customers to maximize value in their oilfield operations and increase the overall efficiency of the well in a large variety of field conditions. More information is available at www.oilfield-chemicals.basf.com

BASF Oilfield Chemicals is part of BASF's Performance Chemicals division. The division's portfolio also includes Fuel and Lubricant Solutions, as well as Plastic Additives and Mining Solutions. Customers from a variety of industries including Chemicals, Plastics, Consumer Goods, Energy & Resources, and Automotive & Transportation benefit from our innovative solutions. To learn more, visit <http://www.performancechemicals.basf.com>.

About BASF

At BASF, we create chemistry for a sustainable future. We combine economic success with environmental protection and social responsibility. Around 112,000 employees in the BASF Group contribute to the success of our customers in nearly all sectors and almost every country in the world. Our portfolio comprises six segments: Chemicals, Materials, Industrial Solutions, Surface Technologies, Nutrition & Care and Agricultural Solutions. BASF generated sales of €68.9 billion in 2023. BASF shares are traded on the stock exchange in Frankfurt (BAS) and as American Depositary Receipts (BASFY) in the United States. Further information at www.basf.com.
