

Sustainability News

Dear subscribers,

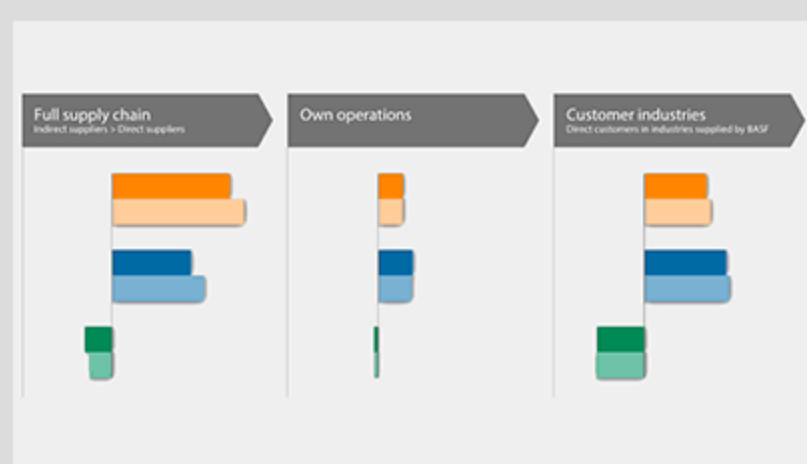

The integrated BASF report for the business year 2016 documents how sustainability contributes to the company's success. As an industry leader and contributing member of society, BASF strives to create value for society at large. But what does this mean, and is there a way to assess it? For the first time, BASF has released the results of its "Value-to-Society" assessment. In an interview, Dr. Dirk Voeste, Vice President Sustainability Strategy, explains what this new approach is about.

In the current newsletter we also report on a school experiment, which made it straight from the school lab to outer space and the International Space Station (ISS) and we provide current examples on how our customers in the construction industry improve their sustainability performance thanks to BASF's Master Builders Solutions® products.

We hope you enjoy reading our newsletter and invite you to explore the multitude of exciting topics on our [online platform](#).

Yours,

The editorial team

"We measure our contribution to a sustainable future"

For the first time, BASF has released the results of its "Value-to-Society" assessment which reflects BASF's financial and non-financial impacts on society in monetary terms. In an interview, Dr. Dirk Voeste, Vice President Sustainability Strategy, explains this new approach.

BASF report 2016 published

Containing all key figures for the 2016 business year, BASF's corporate report was released at the end of February. As an integrated report, the publication documents the company's economic, environmental and social performance. This year's introductory section shows how BASF's innovations contribute to a sustainable future and the UN Sustainable Development Goals.
