The Blackie site formulates and manufactures polyurethane systems used in insulating and non-insulating applications. Products include BASF's WALLTITE® spray-applied polyurethane insulation/air barrier system. As a bulk distribution hub for polyurethane raw materials, the site also services western Canada's wood binding and fertilizer markets.

BASF is active in the Blackie community, supporting science education, ecology, health and safety programs, and other local community-based initiatives through monetary donations and employee volunteer efforts. The site has supported local organizations, including the Royal Canadian Legion, Blackie Ag Society, High River Performing Arts Foundation, Highwood High School, and Blackie Elementary School. Since 2013, the company has delivered its BASF Kids' Lab chemistry workshops to students between the ages of 6-12 across the country. Most recently, offering the sessions through a virtual series.
