CHINAPLAS 2023: BASF accelerates the plastics journey toward a more sustainable future

- **Creating solutions for how plastics are made, used, and recycled**
- **BASF at CHINAPLAS 2023: Hall 17; Booth no. 17F71, Shenzhen World Exhibition & Convention Center, China**

Shenzhen, China – February 6, 2022 – At CHINAPLAS 2023, BASF will present its market-leading products and sustainable solutions for all phases of the plastics journey: Make, Use, and Recycle.

At the MAKE phase, BASF improves how plastics are made – from product design to the choice of raw materials, including renewable or recycled feedstock and the manufacturing process. In addition, BASF’s Product Carbon Footprints (PCFs) can improve CO₂ transparency in the value chain and validate its customers’ claims for creating low-carbon plastics.

In the USE phase, solutions to improve energy efficiency through BASF’s lightweight and durable materials are available. The company’s advanced material solutions also enable more sustainable applications in infrastructures for eMobility and renewable energy.

In the final RECYCLE phase, BASF highlights its efforts to accelerate a circular economy through mechanical recycling, ChemCycling™, and other technologies to close the loop.

“At CHINAPLAS 2023, we are pleased to demonstrate our commitment to our

plastics journey and how BASF's solutions help our customers decarbonize their value chains. We will continue to innovate and contribute to the ultimate goal of a circular economy together with our customers and partners," said Andy Postlethwaite, Senior Vice President, Performance Materials Asia Pacific, BASF.
