![BASF - We create chemistry]

Quick Guide: Previous products check for loadings of polyol/lupranol (F310)

Introduction:

- The preload database is valid for the bulk loading of polyurethane components.
- Please check your preload, before sending the truck to a loading point via https://pmmes.basf.com/Vorladedatenbank/
- The preload database shows you, which preloads are allowed or not allowed.
- If cleaning is obligatory (e.g. for polyols and polyol components), tank container has to be cleaned according to EFTCO (-> ECD !).

How to search?:

- Select your loading point.
- Select the product type, you want to load.
- Type in your preload and press OK.
- Result is shown in the table.

Tips and tricks:

- Always check you previous product before loading. Via the link above or via hub-truck-bulk@basf.com

- The same product name does not necessarily mean that it will be allowed again. Product type or number will determine whether your previous product is allowed.

- The chemical name should always be mentioned on the ECD. The commercial name is not allowed.

- Feed/food, oils and anti-foaming agents are NOT allowed.

FAQs:

- **What should I do, if a preload is not mentioned in the database?**
  Please ask the responsible Transport Management Officer (hub-truck-bulk@basf.com) to initiate an update of the database. Therefore the Material Safety Data Sheet of the preload is always needed. Otherwise, you have to send another truck.

- **My preload is only similar to the mentioned preload in the table. Is the result the same?**
  Sometimes, similar names doesn't belong to similar products, therefore you have to ask the responsible contact persons, whether this similar product name is allowed or not. For the decision, a MSDS is needed.

- **What does the result "ask for Info" stand for?**
  In these cases, a general decision is not possible. A decision on a by-case basis is needed. Therefore please ask the responsible contact persons.

- **I forgot my password and/or user name. How do I get a new password and/or new username?**
  If you have forgotten your password and/or user name, please send an email to PU-VMI@basf.com.

- **How to request a new username and password for an additional user?**
  Please send an email to PU-VMI@basf.com to request access rights for a new user.
